

# Make every table explain what it means

Turn tables, notes and human decisions into evidence-backed, reviewable business definitions.

## WHY

The refund, missing-data and time rules that decide a number are often scattered across sources and people's memory.

## HOW IT WORKS

1 Select sources

2 State the goal

3 Answer and confirm rules

4 Review candidate definition and evidence

## BOUNDARY

The current result is a reviewable candidate definition, not a formal Contract. The workspace stays local; model context is limited to the selected sources.
